

THE IMPORTANCE OF LEARNING AND TEACHING IT TERMS IN ENGLISH

Mehriban Dauletmuratova,
*assistant teacher, Nukus Branch of Tashkent
University of Information Technologies, Uzbekistan, Nukus*

Abstract: This article provides information on the methods used in teaching English and the essence of learning and teaching IT terms in English.

Keywords: English language, teaching methodology, innovative ideas, information technologies, dictation materials, visual aids.

Today, almost all industries operate using information technologies. In order to improve the quality of services provided in Uzbekistan, great attention is being paid to the development of the sector and the implementation of innovative solutions. Advanced technologies necessary for research and resource extraction, modern industry, medicine and security will be developed and introduced. The use of information technology in various fields is expanding more and more. This is an indication of the increasing demand for the services of IT professionals. Educating children as fully mature, high-potential, loyal to the ideas of national independence, at the same time thoroughly mastering modern knowledge, computer technologies, and mastering a foreign language is a requirement of today's era. After all, today's youth are our tomorrow. In this regard, today's teachers have a great responsibility, it is a very difficult task to impress or interest the students in the rapidly developing era.

Methodological training of English language teachers is especially important. Along with good knowledge of science, only a teacher who has widely used the opportunities of information technologies, which are widely introduced in education today, can achieve high results during a short-term work activity and should have information and be able to use Internet and computer capabilities at a high level. For this, of course, for the interesting passage of each lesson, a live, interesting organization through multimedia tools, didactic materials, and visual aids serves the effectiveness of education. As it was determined, the basis of the English language science is manifested in the formation of students' speech

activity skills. It is known that speech activity can be both written and oral. Only mastering oral speech cannot be called practical knowledge. The process of practical acquisition is characterized by acquisition of all types of speech activity. A student learning a foreign language should be able to understand his thoughts clearly and fully. Studying the geography, literature, and history of the country where the language is being studied will also encourage you to master the language perfectly. Here, the lesson conducted using multimedia tools is of great importance. In addition, it should be noted that high results are achieved using modern educational methods in the course of the lesson. For example, brainstorming and working in a group can have a huge impact on how you work. In this, students discuss the topic in every way; express critical opinions, which in turn help to develop the question-answering, speaking, logical thinking skills of a person, and to develop the culture of debate.

Teaching foreign languages on the basis of innovative technologies greatly helps students in their professional activities. Students can study foreign languages such as English, German, and French closely related to their major through various programs such as TOEFL, IELTS, and English for All and Internet connection. Studying abroad through the Internet allows you to meet people in different languages, to get to know the lifestyle of countries. Communicating with a person of the country whose language is being studied helps the student to be able to express everything in his own language, correct his mistakes and learn new nouns.

In our republic, new methods and requirements have been developed in accordance with the general European recommendations (FR) on the construction of knowledge and CE of foreign language teachers. According to it, textbooks were created for students of general education schools and vocational colleges. Classrooms suitable for students were equipped with stands, new information and communication technologies. The demand for learning a foreign language is also increasing day by day. The foreign language is divided into four aspects (reading,

listening and speaking) and the file is provided separately for each of them. Educational technology is the effective introduction of modern information technologies into the educational process. Using innovative methods in English language classes, students' logical thinking skills develop, their speech becomes fluent, and the ability to answer quickly and correctly is formed. Such methods increase students' desire for knowledge. The student tries to prepare thoroughly for the lessons. This makes students active subjects of the educational process. Teaching a foreign language is aimed at forming a cultured person with the skills of self-analysis and systematization of new knowledge. Innovative methods are an integral part of the modernization of the entire system. This ensures that teachers are exposed to the most advanced approaches and then integrate them and use them in their work to achieve significant growth in the education system.
