

INNOVATIVE TECHNOLOGIES IN TEACHING ENGLISH LANGUAGE

Adxamjonova Bibioysha Iqboljon qizi

student of Andijan state institute of foreign languages, faculty of foreign languages and literature

Abstract. *This paper discusses the theoretical basis of the integration of technology and the advantages of using modern technology in English teaching and learning. As modern technology can benefit English education in many ways, it is important to reform the traditional teaching modes by integrating modern technology into English teaching and learning.*

Key words: *modern technologies, teaching English, learning English, language.*

The advance of modern technology has unprecedentedly changed every aspect of our life, including education. Governments from all over the world have attached much importance to technology implementation in education, investing substantial funds in education to improve information technology infrastructure and systems and support increased access to educational technology. It has become an irresistible trend to integrate modern technology in education. Teachers at different teaching levels are demanded to be competent in using modern technology in teaching.

For many years, English teaching methods in many countries are characterised by the traditional oneway teaching mode, known as test-oriented teaching methods. Words, expressions, and collocations are learned by memorization, which constitutes a heavy burden for learning. In addition, under the traditional teaching mode, there is a lack of authentic English-speaking environment which is important to language learning. Nowadays, teachers use modern technology to assist English teaching, enabling students to reach rich resources and have more opportunities for exposure to a foreign culture, which will improve students' interest in learning and in turn change students' attitudes towards English learning¹

Modern technology refers to any technologies that use computers and modern communication means to obtain, transfer, restore, process and allocate information. As for English education, modern technologies such as computers and networks are now being used in classrooms for instruction in composition, literature, decoding, reading comprehension, spelling, vocabulary, grammar, usage punctuation, capitalization, brainstorming, planning, reasoning, outlining, reference use, study skills, rhetoric, handwriting, drama, in short, for every area of language arts. Many studies conducted in recent years have indicated that modern technology can improve English teaching and

learning. In general, modern technology can benefit English teaching and learning in several ways.

Studies have indicated that modern technology is an effective teaching tool. Integrating modern technology in the process of teaching and learning helps students experience things virtually. For example, if teachers want to lecture a topic about Disneyland, they can display the scene of Disneyland through a video as not all the students have the opportunity to go there before the lecture. The simulated environment gives students an experience similar to the real experience, in which traditional teaching modes cannot match. On top of this, by modern technology, students can listen to native speakers' spoken English or they can communicate with native speakers directly.

For example, students can watch English movies on YouTube and experience native speakers' English. Teachers can use Facebook as an instructional tool in classroom teaching, helping non-native English speaking students to communicate with native speakers. Supporting individual learning Modern technology enables individual learning. Teachers can send videos or teaching materials to students, which often happens in a flipped class. Students can watch the videos and learn the teaching materials at their own pace. They can fast-forward, rewind, or replay the videos whenever they require. This is helpful for the less informed students. They can listen to a teacher's lecture again and again, which can not be realized in a traditional class. Particularly, for those students who cannot attend the class, technology-assisted learning is an aid. Furthermore, there are various kinds of Apps that can be downloaded onto phones. Students can use them, based on their needs, for learning English vocabulary or grammar. Some Apps may provide e-books, which are useful for the improvement of reading and listening skills. Only if there is internet, students can study without time and place limits.

The use of modern technology can greatly improve the efficiency and effectiveness of English teaching and learning, which has been proven by many studies. Integrating modern technology in education has become a national strategy of education worldwide.
