Annotation: *This article describes the advantages, opportunities and disadvantages of online education in the process of teaching foreign languages. The importance of modern technology in the educational process is discussed.*

Key words: *foreign language, distance education, modern technology and their use, online schools*

Today, according to the requirements of the times, it is required to be advanced in every field. In particular, every professional feels the need to know a foreign language and use modern technology tools correctly and effectively in his work process. This is certainly natural. In today's developed and developing world, the more educated you are, the better. In addition, technologies have their own place in each field, so employees are required to have sufficient skills in their use. Of course, enterprises, organizations and institutions are not limited only to the requirement of technical literacy. In accordance with the requirements of the time, knowing one or two other languages besides the mother tongue will only and only bring luck in our work process. As we all know, various activities are being carried out for the development of each sector, and a number of investment projects from foreign countries are coming to our country and occupying a special place in the growth of the economy. As a result of this, the need for personnel with knowledge of foreign languages is increasing in enterprise organizations. It can't be cause you don't have enough time to learn languages. Currently, there are traditional and remote types of education. Distance education is for you if you cannot spare time for education or are far from centers that offer quality training courses. In addition, due to the spread of the COVID-19 disease, which is known to everyone, all pupils and students were forced to learn in a distance system. This, in turn, helped to demonstrate how effective this direction is. It was also possible to compare traditional education and distance online education.

Language helps us to communicate with other people, to express our feelings and desires. And learning foreign languages makes our mind grow even more. During the process of language learning, we learn not only the language, but also the history of this language. In addition, the cultural traditions of the country

that communicates through this language will not be left out of our attention. Learning a foreign language encourages a person to think more openly. Your outlook and imagination will expand and become clearer. Due to such advantages, various methods of language learning are developing. For example, in the process of teaching English, the learner's age, potential and level are taken into account. This, in turn, makes it easier to achieve the expected result. There are three levels of English language teaching: elementary, intermediate, and advanced. There are separate programs developed for each stage. As in any field, modern technologies play a big role in learning English. During teaching, the student's ability to speak English will grow faster if the teacher can effectively use audio recordings of local speakers, English cartoons, movies, and TV shows. Exercises shown in books have become boring, and it's time to use technology.

Despite the fact that many parents prefer traditional education to online education, due to the pandemic, people are forced to learn and teach remotely from home. This process showed that distance education also has its own advantages.

- time spent traveling to school, educational center and university is saved;
- the saved time makes it possible to do more;
- money spent on travel and similar expenses will be saved, the family budget will benefit;
- the potential of effective use of technologies increases;
- lessons are not missed due to distracting games, parties or health problems;
- doing independent work increases the potential for self-directed learning, that is, the student works hard for his own benefit and is sought after;
- the culture of using technology is formed;
- it is possible to participate in class processes from anywhere by connecting to the network;

At the same time, there are also harmful aspects

- our country does not yet have sufficient conditions for online education;
- network connection is not available in some areas;
- students of any age do not have personal gadgets, i.e. lack of equipment;
- students have not developed satisfactory skills for distance learning;
- the level of competition decreases, as in the process of teaching;
- only a part of teachers have the potential to provide online education, that is, not all of them have strong knowledge of using technologies;

- since the students receive special education from their home, it is rare for them to apply the knowledge they are acquiring, and this slows down the process of assimilation;

Such problems and achievements were shown to everyone due to the pandemic

In conclusion, each style has its own merits and demerits. It is up to the people themselves to overcome the shortcomings. Online education has many possibilities that have not yet been seen. It is only necessary to reveal them.
